2-6. Printer CR-750 (Specification)

1. Printer

Part number:

CR-750

· No. of stations:

2

Printing system:

Inner hammer, rubber character selection

type

Printing capacity:

12+12 columns

Character positions:

12characters (13characters in the even

columns)

Character size:

1.6mm (W) x 2.7mm (H)

Print pitch:

Column spacing 2.8mm Line spacing 4.6mm

Print speed:

Approximate 2.5 lines/s (average)

Paper feed speed:

Approximate 27 lines/s (Speed when the

receipt is issued)

Approximate 16 lines/s (Receipt and jour-

nal fast paper feed)

· Reliability:

MCBF 2.0 million lines

2. Paper

• Paper roll dimension:

44.5±0.5mm

max. 83mm in diameter

Paper quality:

Journal

Bond paper (paper thickness: 0.06 to 0.085mm paper weight; 52.3 to 64g/m²)

3. Inking

Ink supply system:

ink roller

· Form:

Roller

Specification:

Material - rubber

Print color:

purple

4. Logo stamp

· Material:

porous rubber

· Stamp color:

purple (single color)

· Max. stamp size:

30mm (W) x 15mm (H)

• Stamp pattern:

[YOUR RECEIPT THANK YOU]

or

[VIELEN DANK]

Ink refill:

Allowed (UINK-1001CCZZ)

5. Cutter

2-7. Drawer

[Outline]

• Standard equipment: Yes (1)

Max. number of

connectable drawer: None

The drawer consists of:

(1) Drawer box (outer case)

(2) Money case

(3) Lock (attached to the drawer)

[Specification]

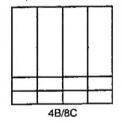

(1) Drawer box and drawer

| | ER-A250 |
|-------------------------------|--|
| Model name of the drawer box | SK-423 |
| Size | 420 (W) x 426 (D) x 114 (H) |
| Color | Light olive gray |
| Material | Metal - |
| Bell | _ |
| Release lever | Standard equipment; situated at the bottom |
| Drawer open sensor | Standard equipment |
| Separation from the main unit | Allowed (needed the shield plate kit) |

(2) Money case

| | ER-A250 |
|--|------------|
| Separation from the drawer | Allowed . |
| Separation of the bill compartments from the coin conpartments | Disallowed |
| Number of compartments | 4B/8C |

Deign:

(3) Lock (LOCK KEY: LKGIM7331BHZZ)

Location of the lock:

Front

· Method of locking and unlocking

Key No. SK1-1:

To lock, insert the drawer lock key into the lock and turn it 90 degrees counter clock-

wise.

To unlock, insert the drawer lock key and

turn it 90 degrees clockwise.

[Supplement]

The secondary purposes of the drawer include;

Checking of roll coins: Coins can be piled on the drawer for

checking the number (amount) of them.

3. BATTERY

3-1. Memory back up battery

For memory back up, the dry battery ULM-3 (3 pieces) is needed.

Memory holding time:

Approx. 1 year after NEW dry batteries are inserted.

2. Battery exchange method:

When the low battery symbol "L" lights up, batteries (ULM-3) replaced by the following method, within 2 days.

1) Power on the ECR.

2) Mode sw turn to "TIME MODE".

3) Remove the OLD dry batteries (3 pieces).

4) Insert the NEW dry batteries (3 pieces).

5) Confirm the low battery symbol "L" lights off.

3-2. Low battery

Low battery indication will appear in left side of display when the battery voltage is low.

CASE 1: When sitting idle or after completion of transaction.

The machine can indicate the low battery condition. (Always)

CASE 2: Low battery indication will not appear during key operations, and will appear after power up of the cash register.

[Display sample]

0.00 * : Battery is OK.

"L 0.00": Low battery (You have to change the batteries.)

After finalization

"F 12.34" : Battery is OK.

"L 12.34": Low battery. ("L" indicate instead of "F".)

3-3. No battery

If the user forgets to replace the battery and the battery voltage falls below a certain level, or if a power failure occurs with no battery installed, memory contents cannot be retained. The CPU judges it as no battery and perform the master reset. In this case, all the settings and registrations are cleared. If, however, the power is supplied to the AC card, even though no battery is installed, memory contents are retained.

7. TEST FUNCTION

- To execute the diag test, set the mode switch to SRV1, enter a desired JOB code, and press ST (subtotal) key.
- 2) The test message is printed by the printer.
- 3) The RAM test will clear the totalizer and the preset values.
- 4) Test contents and key operations

| No. | Test contents | Key operations |
|-----|----------------------------|----------------|
| 1 | Mode SW test | 1 → ST |
| 2 | Key test | 02 → ST |
| 3 | Display buzzer test | 3 → ST |
| 4 | Drawer test | 4 → [ST] |
| 5 | Printer test | 5 → ST |
| 6 | RAM test | 6 → ST |
| 7 | Battery voltage sense test | 7 → [ST] |
| 8 | Sequential test | 10 → [ST] |
| 9 | Aging test - | 11 → ST |

ST = #/TM/ST

1. Mode switch test

1) Key operation

1 → ST

2) Test procedure

Change over the mode switch as shown in 3). If the mode switch data in the proper sequence is not read with the above operation, an error print is made.

To cancel this test mode, set the mode switch from a position other than SRV1 to SRV1. In this case, the completion print is made. During the test, the display indicates hard codes which correspond to switch positions.

3) Mode switch operation

Start 01 \rightarrow 02 \rightarrow 03 \rightarrow 04 \rightarrow 05 \rightarrow 06 \rightarrow 07 \rightarrow SRV1 (END)

No check when returning the switch to SRV1.

Completion print

Error print

2. Key test

1) Key operation

____02 → ST

2) Test procedure

Perform the keyboard check with the sum check data of the key code. Enter the sum check data of each model in the four digits preceding the diag number 02, and compare the data with the key position code which is added until TL/NS key is pressed. (TL/NS key is out of calculation.) If the data coincide with the code, the completion print is made. If not, the error print is made.

(At that time, a catch sound is generated and the key code is displayed in the lower two digits on the display.)

3) Key check sequence

There is no specified key check sequence. Pressing TL/NS key terminates the key check and starts comparison with the sum check data.

Completion print

2

Error print

******2

| No. | Model | Sum check data | Production start |
|-----|----------|----------------|------------------|
| 1 | ER-A250V | 45 | May 1993 |

Sum check data table

| | | THE HELDIC | • | | | | | | |
|----|----|------------|----|----|----|----|----|----|----|
| | | , | | | R↑ | JŤ | B5 | 35 | 25 |
| | | | | | 85 | 84 | A5 | B4 | 14 |
| | | | | | 95 | A4 | B3 | 34 | 11 |
| 45 | 55 | 71 | 75 | 81 | 91 | A1 | B1 | 33 | 23 |
| 51 | 53 | 65 | 74 | 83 | 92 | A2 | B2 | 31 | 21 |

| 52 | 42 | 43 | 61 | 62 | 63 | 72 | 93 | 24 | 12 |

All the key position codes of each model are summed up and the total is used for the sum check data.

3. Display buzzer test

1) Key operation

3 → [ST]

2) Test procedure

Check the continuous buzzer sound and the display state.

Display state:

1.2.3.4.5.6.7.8.9.

The decimal points will shift from the lower digit to the upper, step by step.

To cancel the test mode, press any key, and the buzzer will stop and "0" will be displayed.

Completion print

3

4. Drawer test

1) Key operation

4 → [ST]

2) Test procedure

The drawer opens with the above key operation. Check that the display shows "0" when the drawer is open and "C" when closed. Press any key to terminate the test.

Completion print

Δ

Display

C

Display

0

5. Printer test

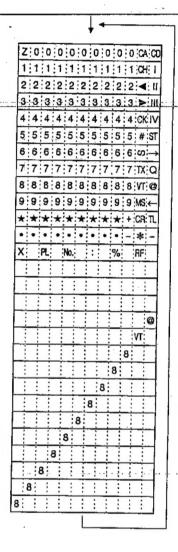

1) Key operation

5 → ST

2) Test procedure

With the above key operation, the print test pattern is repeatedly printed. Pressing any key will terminate the test after completion of one cycle print.

(Print format)

6. RAM

1) Key operation

6 → ST

2) Test procedure

Write the data shown below into the external RAM, read it out from the RAM, and compare it with the write data. If there is no error, the mode returns to the key wait state. If there is any error, the buzzer sounds intermittently and the error print is made. To clear the error, press CL key.

(This test will clear all the settings. To start a normal operation after this test, therefore, the master reset must be performed.)

Completion print

6

Error print

7. Battery voltage sensor test

1) Key operation

7 → ST

2) Test procedure

The state (H/L) of PORT P33 is read and displayed as follows:

7

1--- At HIGH

7

0 --- At LOW

To terminate the test, press any key.

Completion print

07

8. Sequential test

1) Key operation

___10 → ST

2) Test procedure

Enter the sum check data of each model in the four digits preceding the diag number 10.

With the above key operation, all of test 1, 2, 3, 4, 5, and 6 are executed sequentially. For test 5 (the print test), however, a simplified print is made.

After completion of each test, its completion print is made. After completion of the test No.6, the receit is issued. In case of an error, the error print is made and the next test is performed.

Simplified print format

Z 1 2 3 4 5 6 7 8 9 CR -

· * 9 8 7 6 5 4 3 2 CH CD

Aging test

1) Key operation

11 → ST

Enter the time (sec) of repeated operations on the underlined section

2) Test procedure

The non-sail operation is repeated at the interval of preset time (sec).

8-2. Circuit description

(1) RAM Read/write circuit

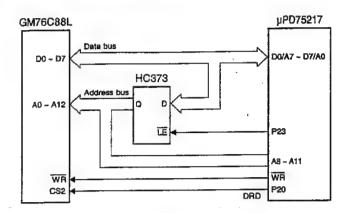

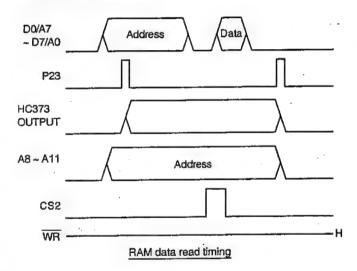

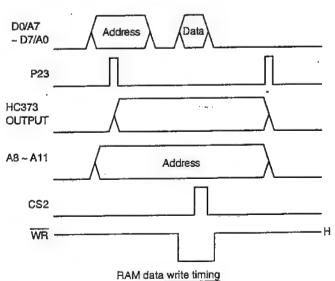

Fig. 8-2

Since the 8-bit data bus of the μ PD75217 shares the same lines with the 8-bit address bus of the GM76C88L, selection of the RAM chip by the μ PD75217 causes the HC373 to latch the 8-bit address when P23 of μ PD75217 is inputted.

(2) P-OFF & RESET circuit

There are two cases of power OFF/ON with different sequences as follows:

i) OFF/ON by the AC cord

. At power off

"When a power failure occurs or the AC plug is disconnected from the power outlet, P-ON voltage falls as well as VO voltage. When it falls below 15V, the current flowing through the zenor diode (ZD1) stops to drop the voltage at point (a), turning the PE signal LOW.

At power ON

When the power failure is reset or the AC plug is connected with the AC outlet, V0 (P-ON voltage) rises to generate 5V with ZD7. When the input voltage of reset IC8 (PST520D) exceeds 4.2V, the output of IC7 turns HIGH to operate the reset circuit, providing reset signal LOW and resetting the CPU.

At the same time, a current flows through zenor diode (ZD1) to rise the voltage at point (a). As Vcc voltage rises, PE signal turns HIGH.

ii) OFF/ON by the mode SW

At power OFF

When the mode switch is set to OFF position, P-ON voltage falls. When it falls below 15V, the current flowing through the zenor diode (ZD1) stops to drop the voltage at point (a), turning PE signal LOW as VCC voltage rises.

At power ON

When the mode switch is set to ON position, P-ON voltage rises. When it exceeds 15V, a current flows through the zenor diode (ZD1) to rise the voltage at point (a), turning PE signal HIGH as VCC voltage rises.

(Note) In this case, the rest signal LOW is not outputted.

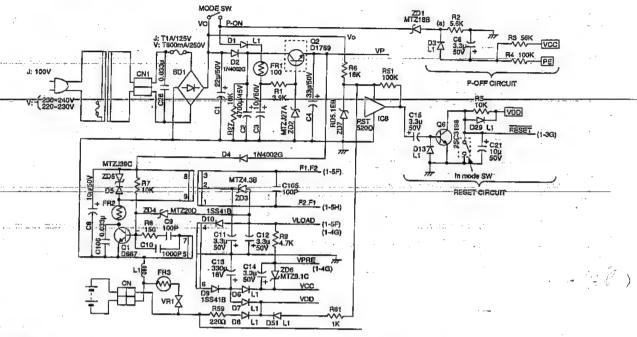

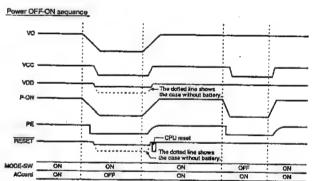

iii) Reset circuit

When the mode switch is set to SRV' position, RESET signal LOW is outputted to reset the CPU.

JF : Paper feed of journal
STAMP : Stamp control signal
VP : Printer power
MOTD : Paper feed motor

MC1 ~ MC4 : Printing wheel stepping motor

R : Rest senser

Outline of printer control

 The ER-A250 employs the CR-750 which is of the font rubber type of the inner hammer system. This printer is equipped with the DC motor for paper feed and the stepping motor of the outer rotor type for rotating the font rubber.

The paper feed motor is driven by the CPU through port P30 and

the driver.

The stepping motor is driven by outputting binary pulse signals from port PH0 \sim PH3 through driver STA401A.

- There are six hammer magnets in the receipt side and six in the journal side for striking the font rubber.
- 3) Signals sent from the printer are the TIM signal which is in synchronization with the rotation of the paper feed motor, and the R signal which is generated when the font rubber rotates one revolution.
- 4) In the CR-750, the font rubber is rotated by the step motor, and the font to be printed is stopped at the harmmer position according to the number of pulses sent from the step motor.

When a reverse rotation pulse is applied to the step motor, the drum tries to rotate in the reverse direction. However, the reverse rotation prevention pawl is provided on the drum and the font rubber is completely locked.

Under this state, the hammer is driven to print. When, therefore, printing is performed, the drum is stationary. To print fonts which are in different lines, the drum must stop at each font position, reducing the printing speed.

(6) Paper feed motor drive circuit

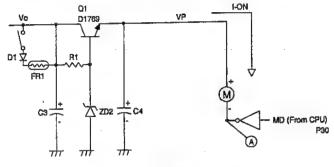

Fig. 8-8

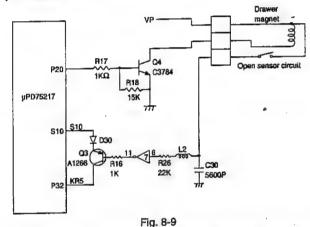

① When the motor is ON:

The MD signal goes HIGH. \rightarrow The level at point A goes LOW. \rightarrow The VP turns active and the motor rotates. (The current i-ON flows.)

② When the motor is OFF:

The MOT signal goes LOW. \rightarrow The level at point A goes HIGH. \rightarrow The VP turns off and the motor stops.

(7) Drawer control

The drawer magnet is driven when P20 of the μ PD75217 changes from low to high state.

(8) Power circuit

1) Block diagram

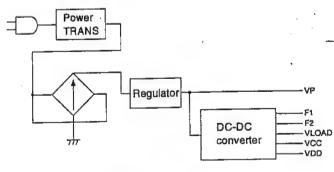

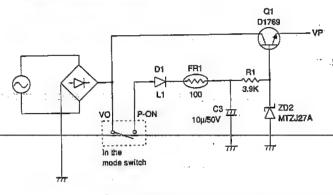

Fig. 8-10

VP : Printer operating F1, F2 : Display tube heating VLOAD : Display operating

VCC : +5V VDD : +5V

2) Printer voltage regulator circuit

Flg. 8-11

- 1) If VO-P-ON was not shorted within the mode switch (power off), TR1 remains inactive as no voltage is applied to the base of Q1.
- 2) If VO-P-ON was shorted, Q1 goes active as voltage is added to the base of Q1.
- 3) With activation of Q1, the voltage VP begins to increase.
- 3) DC-DC converter

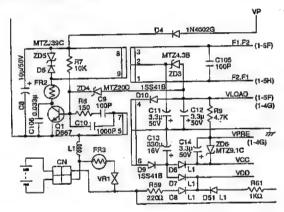

Fig. 8-12

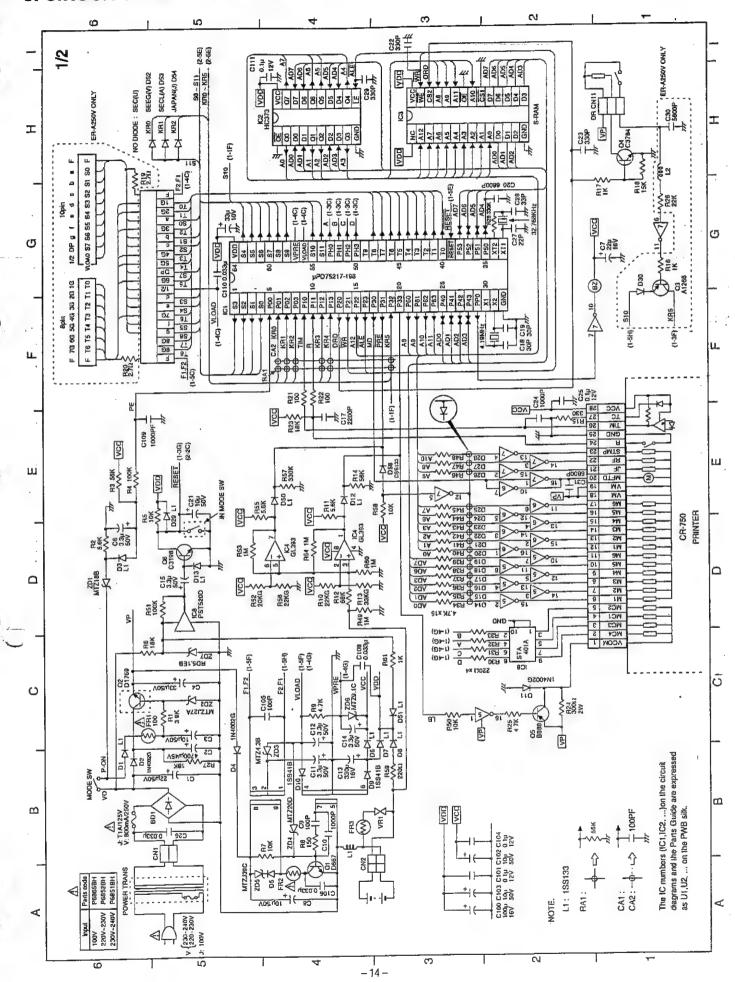

The bias is added to the base of Q1 when the power switch is turned on, so that Q1 starts self-oscillation. VLOAD from the secondary side is feed back through the zener diode ZD4 to suppress voltage fluctuation on the secondary side.

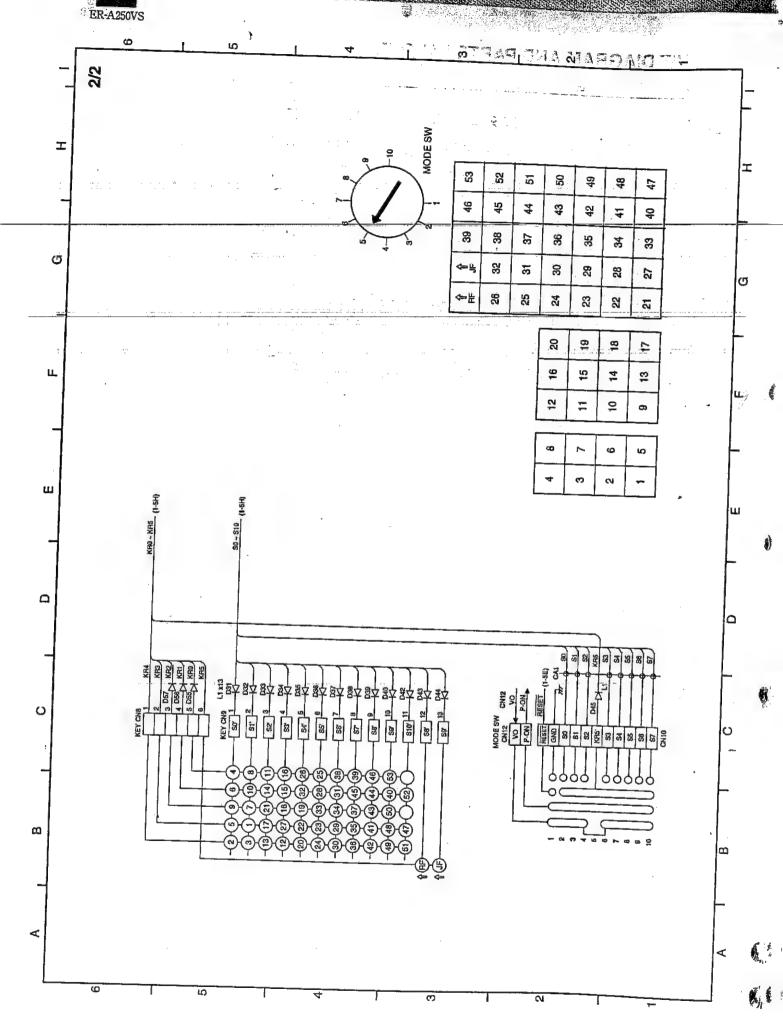

(9) Battery voltage monitoring circuit

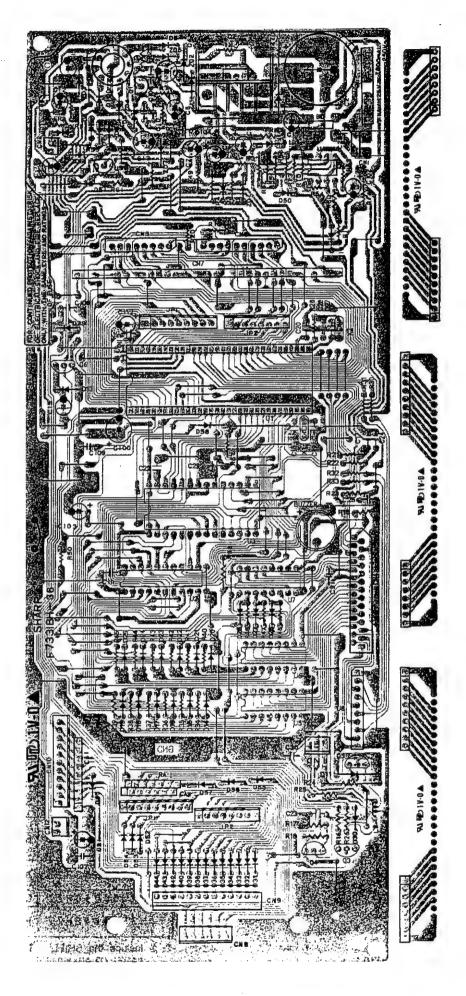

The battery voltage level is manitored by the comparator IC (GL393). The following signals are provided depending on the state of battery voltage VB.

| VB | → 2 | 2.5 | . . | 3.1 ← |
|--------------------|-----|-----|----------------|-------|
| VB Battey LB (P33) | L | | L | Н |

10-2. DRAWER SEPARATION KIT

CAUTION:

The drawer unit should be securely fitted to the supporting platform to avoid instability with the drawer open.

Conversion of this unit should be done by qualified service person. To prevent electrical shock, disconnect supply cord before servicing.

DRAWER REMOVAL PROCEDURE

1. Item required by model and destination

| Model name | Item required | Destination |
|------------|-------------------------------------|-----------------|
| ER-A250 | Shield Plate Kit (DKIT-8652BHZZ) | Europe, UK, Aus |

2. Parts list

Shield plate kit (DKIT-8652BHZZ)

| Parts code | Description | Q'ty | Remark |
|---------------------------|-------------------|------|------------------------|
| DUNTM19108HZZ | Shield plate unit | 1 | *1 |
| PGUMM6697BHZZ | Rubber foot | 3 | 1 |
| XH8SD30P12000 | Screw | 3 | For rubber foot |
| XHBS030P08000 | Screw | 1 | For transformer cover |
| L X - H Z O O 5 6 B H Z Z | Screw | 1 | For top cabinet |
| LBSHC0004BHZZ | Clamp | 1 | |
| TINSE7284BHZZ | Inst manual | 1 | This removal precedure |

* 1 Include the SHIELD PLATE (GITAU6754BHZZ) with NAME LABEL (TLABM6944BHZZ).

3. Procedure

| No. | Description | Parts name | Parts code |
|-----|---|----------------------|--------------------------------|
| 1 | Remove four top cabinet holding screws. | | |
| 2 | Remove the top cabinet from the drawer. Unfasten the transformer and drawer connectors. | | |
| 3 | Remove the transformer cover holding screw. | | |
| 4 | Remove the transformer cover from the drawer. | | |
| 5 | Get the shield plate unit ready. | Shield plate unit | DUNTM1910BHZZ |
| 6 | Fasten the rubber foots with screws at three locations. | Rubber foot Screw | PGUMM6697BHZZ XHBSD30P12000 |
| 7 | Insert the wire of the drawer solenoid microswitch in the clamp and install the clamp to the shield plate. | Clamp | LBSHC0004BHZZ |
| 8 | Install the transformer cover to the rear right of the shield plate and fasten the transformer cover with screws. | Screw | XHBSD30P08000 |
| 9 | Replace the top cabinet to the shield plate. Fasten the transformer and drawer connectors as this point. | | • |
| 10 | Fasten the top cabinet with five screws. | Screw | LX-HZ0056BHZZ |

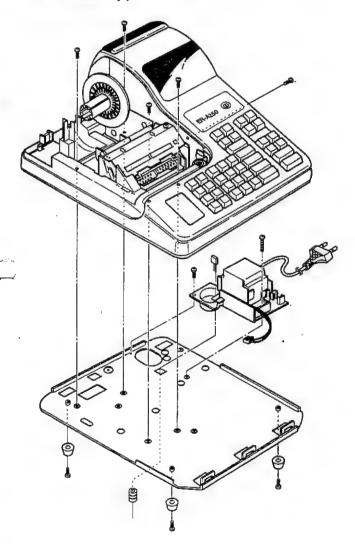

Tailor the drawer solenoid microswitch wire to the size the user wants. Use the AWG22 wire for this.

4. Setting

Master reset

While pressing the Journal feed and 8 key, rotate the MODE switch from SRV2 to SRV1 position.

ER-A250 assembly procedure

■ Index

The IC numbers (IC1, IC2,.....) on the circuit diagrams and the Parts Guide are expressed as U1, U2,....on the PWB silk.

Because parts marked with "A" is indispensable for the machine safety maintenance and operation, it must be replaced with the parts specific to the product specification.
